

Document Output

eSimplicity

e-Simplicity suite for document processing and presentment is a rules based, feature rich solution that streamlines the traditional process of document processing and delivery, meets the ever changing requirements and delivers direct return on investment.

e-Simplicity can capture, translate and distribute documents based on your organization requirements through an automated workflow. Since the solution is based on open architecture and driven by sets of rules and conditions, and further enhanced by our enterprise application integration solution, each transaction can be executed to meet multiple requirements (customer, supplier or organizational) automatically, removing the manual user intervention/possibility of error and allowing the organization to take advantage of most efficient methods since it will not require an "an all or nothing" approach.

- Flexible and customizable solutions for all output needs
- Design and Brand your documents
- Deliver formats required by partners, customers and vendors
- Distribute documents in most efficient way
- Document Imaging and Integration
- Comply to ever changing Government Submissions (T4, T4A, 1099)
- Meet your organizations constantly changing needs
- Reduced misuse, obsolescence, administration and warehousing
- Reduce implementation costs by utilizing already existing infrastructure
- Deliver return on investment by reducing the cost for document processing
- Present via Web, email, fax and EDI
- Trigger invoice dispute when required
- Facilitate dispute resolution at the line item detail via Web or email collaboration
- Electronically facilitate authorization workflow
- Archive invoice, payment, communication and all other related data in a single web-based system with central access throughout the organization.
- Integrate directly with all the major ERP, back office applications and back end A/R and billing systems.
- Maximize existing investments by complementing your present technology
- Support your current payables processes
